VOLUME 35: NO. 42

ACME, ALBERTA, THURSDAY

NOV. 22nd, 1956

\$1.50 a Year; 5c a Copy

Mr. and Mrs. Mapletop of Calgary were Sunday visitors at the home of their aunt and uncle Mr. and Mrs. E. Maxwell.

Mr. and Mrs. Leon Coates left Wednesday for Sherbrooke, Quebec where Leon will visit his old home town and former school mates and relatives. He will see many changes having left many years ago.

Hospital patients this week are Baby Banack, Linda Holvik, August De Becker, C. C. Dieder, all in the Drumheller hospital.

We are pleased to see Uncle Ross Thorburn is back again after spending several months in Eastern Canada.

Word was received on Thursday by Mrs. E. Maxwell of the death of her oldest sister Mrs. M. Detler aged 88 yrs. of Oshawa, Ontario.

Mr. and Mrs. Cliff Hood and family have Grandpa Hood visiting at their home this week.

Mr. J. H. Coates was a visitor at his home this week. Mr. and Mrs. Coates are spending the winter with his son Leo and children.

We are very proud to say one of our 4-H Club members was selected to represent Alberta at the Toronto Winter Fair, Morley Buyer. Congratulations, Morley. We also congratulate Leo Halstead on his award of Reserve Champion Shorthorn Bull. It seems we have plenty of good stuff in our little community.

Mr. Frank Harris spent several days in Calgary the holiday weekend.

On November 19 the Carbon 4-H Clubs consisting of the Beef Dairy, Grain and Girls Clubs held the organization meeting of a joined 4-H Club.

Elections were held with the results as follows:  
President, the four presidents from each club who will take turns conducting the meetings.  
Secretary.....Jerry Leiske  
Treasurer.....Nova Bayer  
Club Reporter, the four reporters from each Club.

After a lengthy business meeting the boys and girls went home with bright hopes for the coming year.

We as 4-H members were pleased to see a good number of parents and visitors at the meeting and we hope that more parents and visitors, who are always welcome to come, will attend to see how we conduct our 4-H Club Work.

**GIRLS' CLUB**

The Girls 4-H Club held their second meeting on November 19 in the school. After the reading of the minutes from the previous meeting by the Secretary, the girls planned and reviewed on the program for this year. The Project Books were then distributed after which Miss Vern Ohlhauser gave an interesting demonstration on "How to Make a Hanger Cover" Continued on page five

## Meet your bank manager...

He's easy to meet—and a

good man to talk things over with.

Not just because he knows a lot about banking, but because he can be counted on to apply that knowledge and experience to your particular need.

To him banking is more than dollars and cents, more than figures in a ledger. To him, banking is the opportunity to work with people—through bank services to help with your problems, your hopes and plans.

That is what he has been trained to do.

That is what he likes to do. You'll find he's a good man to know.

### Revolving credit and strikes

(From The Times, Taber, Alta.—August 9, 1956)

"Let us all be happy, and live within our means even if we have to borrow the money to do it with."

That was written nearly a hundred years ago by Artemus Ward, the American humorist, and it is perhaps more necessary today to add his famous footnote, "This is rote sarcastical." For much of our domestic and political economy is based upon the paradox that we can live within our present means and at the same time happily borrow those of the future. This is actually being done on the assumption that we can borrow ourselves into permanent prosperity.

All the old economic maxims have gone into reverse. Thrift has become a sin, and debt a virtue. Hatred of debt has gone with Longfellow's village blacksmith who "looked the whole world in the face, for he owed not any man." Where we used to be urged to "save the pence and the pounds will take care of themselves," we are now high-pressed to spend both and borrow more pounds, and the creditor will take care that we pay them back with compound interest. Indeed, we are told that there is now what is known as "revolving credit" in which you never get out of debt. This system is called "budgetism" and the beauty of it is that you don't have to keep budget at all. Young couples merely commit themselves to regular unvarying monthly payments on all major items of living expenses, and we are told that they are "so bemused by the rhythm of equal monthly payments that they hardly think about the 'cost' of the money."

In the old days criminals used to be committed to a period of penal servitude on the treadmill, a revolving staircase, which they kept in motion by perpetual climbing, but they could never reach the top. In these days law-abiding people are committing themselves voluntarily to a similar form of punishment and they seem to like it. They are paying between 12 and 18 percent annually on a perpetually unpaid balance, but they don't worry about that. The department stores and the banks like it. "It's fantastic," one store executive said. "Interest charges come to 18 percent a year. If you want to know whether we like the plan, just ask us if we like money."

Whether we like this budgetism or not, it is useless to protest that it is illogical. The revolving credit plan has proved a success and become a way of life. It reminds one of the old negro song about "Climbing up de golden stairs." The stairs in this case are golden, but the budgeters can hardly be said to be climbing and they can regard themselves as lucky if they can keep going where they started. The danger is in the stairs going into reverse, but the fear of that should be an incentive to hard work. It should have prevented the steel strike in the United States, which is a disastrous example of deliberately reversing the revolving credit and landing the workers in devolving debt.

If we have to borrow in order to live within our means, then we must keep the wheels of industry revolving, for it is upon them that our credit, our prosperity and happiness depend.

### We're grateful to our town

(From The Clarion, Kindersley, Sask.—October 4, 1956)

In the painful weeks since the onset of the editor's last illness, we have learned much about the meaning of life in a small town. It has been a comforting and an inspiring experience to feel a whole community rallying round with help and encouragement and sympathy. We have learned the miracle of courage and strength renewed by a friendly handclasp, offered in silence but more eloquent than any oratory in its message of sympathy and reassurance.

The painful memories of these tormented days are brightened by a hundred faces, in pleasant focus against a hazy background of Main Street—faces of folk who stopped in the midst of their daily round to ask about the progress of their editor, to assure us that their hopes and prayers were with him or to explain (after the sad news of his passing was known) how deeply they shared in our loss.

We of his immediate family find words most inadequate to express our gratitude for the hundreds of little acts of kindness and expressions of friendship which have been showered upon us by the people of "our town".

### 1700 TYPES

Seventeen hundred types of wool, each with distinct spinning qualities, are produced on Australian sheep ranches. 3219

### If You're TIRED ALL THE TIME

Everybody gets a bit run-down now and then, tired-out, heavy-headed, and maybe bothered by backaches. Perhaps nothing seriously wrong, just a temporary toxic condition caused by excess acids and wastes. That's the time to take Dodd's Kidney Pills. Dodd's stimulate the kidneys, and so help restore their normal action of removing excess acids and wastes. Then you feel better, sleep better, work better. Get Dodd's Kidney Pills now. Look for the blue box with the red band at all druggists. You can depend on Dodd's. 52

**COMEDIAN PHIL SILVERS**, star of stage, screen and television, nibbles on a wedding cake held by his bride, the former Evelyn Patrick. They were married recently in New Haven, Conn., and then drove to New York for a wedding reception. The 44-year-old comedian appears weekly as the fast-talking Sergeant Bilko on "The Phil Silvers Show". His bride, 22, recites commercials on the "64,000 Question" TV show.

#### CLIMBING LIZARDS

The gecko, a small lizard, has minute hooks in its feet which enable it to climb even a pane of glass.

#### WITCHCRAFT

In the middle ages, masters of witchcraft attributed to the amethyst magnetic rays and great healing properties.

### Many uses seen for A-radiation

Atomic radiation facilities for research and development will be available to individual companies in Canada early next year, says Rodney Touche in The Financial Post. The first commercial irradiation plant in Canada will be powered by a 15,000-curie cobalt source, one of the largest gamma radiation sources in the world. It is to be built and serviced by Isotope Products Ltd., Oakville, Ont.

Specific applications of gamma radiation include:

Preservation of food and beverages, pasteurization of milk, meat and beer, curing tobacco, sterilization of canned goods, protection of stored potatoes against sprouting, treatment of grains and flour to kill insects and improve transit in tropical climates.

Sterilizing pharmaceuticals.

Disposal of sewage.

Improving the insulating properties of plastics and raising their melting point. Adding to the life of nylon bearings. Preventing plastic flooring being marked by furniture.

### POLIO CASES DROP SHARPLY

Polio cases were down sharply with all but two provinces reporting absence of paralytic cases.

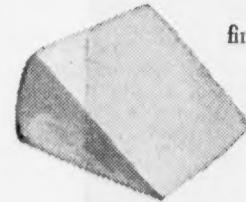

The usual seasonal decline was recorded in figures supplied by the Health and Welfare Department.

Across the country, paralytic cases were down to four from 17 and the total number of cases was at eight compared to 25.

## Timber resources

There was good news for all Canadians coming out of the National Forestry Conference at Winnipeg, says The Financial Post.

There is enough timber in Canada to go on supplying the projected needs of our forest industries in perpetuity, it was reported, and, if we act wisely, there will be sufficient to supply a greatly expanded industry in future.

That is a very different picture from that which used to be painted. A decade or two ago we were told that a wood famine was inevitable; that our vital timber resources were being used and wasted faster than we could ever hope to replace them.

There has been a big change for the better in forestry operation and thinking since then. The old idea that lumber and pulp wood was a one-crop, "slash-and-clear-out" operation has been discarded. In its place has come a growing realization that timber is and should be a regular crop, a crop like wheat or fish or fur, to be grown continuously. But realization must be followed by action, and specifically in these directions.

(1) We must do much more to reduce losses from fire, insects and decay. Each year, we lose to these three enemies enough wood to supply another forest industry as large as the one we have.

(2) We can reduce losses from waste by using more of each tree cut, by using more kinds of trees, some of which are still unpopular with the mills, and more of each log delivered to the mills.

(3) We must put idle forest land to work, and we must make productive areas work harder at their business of growing wood. To do this, we must take a new look at the thousands of square miles that lie along the fringes of our good agricultural land, areas that are at present either good forest nor good farm.

We must have more foresters, more research.

The costs of a wise program are trivial indeed measured against the direct returns alone from a growing forest industry with its raw material supply guaranteed in perpetuity.

## Low grade seed grain for 1957

Crop reports indicate, and observations confirm, a large quantity of comparatively low grade seed grain must be cleaned to plant crops in 1957. In many cases there is a high percentage of shrunken and frosted grain that must be removed; in others the weed seed content is high. Frequently both these conditions exist. For good quality seed, weed seeds must be removed and grain heavily cleaned to remove light, immature, or damaged kernels. This calls for the use of good equipment and careful operations says A. M. Wilson, Field Crops Commissioner, Alberta, Department of Agriculture.

In districts where municipal seed plants operate or where well-equipped privately owned plants are situated, the best seed can be salvaged from poorer lots of grain. Farmers in areas not served by these well-equipped plants will have to depend on portable cleaners for their own fanning mills to clean the seed they need. While dockage machines in country elevators have been used as seed cleaners they have proved unsatisfactory in doing the job. They are dangerous because different lots of seed grain are mixed and contamination with weed seeds not already in the grain may take place.

There is a big job to be done and farmers looking into the future will save the best of their crop for seed and make early arrangements to have it cleaned by good equipment.

### INDEPENDENT INK DRINKER

New fountain pen with no moving parts, filling levers, ink sacs or cartridges, fills automatically when dipped into ink pots, reports The Financial Post. The writer removed pen's barrel and exposes inner cell to ink which then moves into the pen through capillary action. Takes just 10 seconds. No need to wipe pen off afterward, since outside of cell is coated with special material that sheds excess ink.

Camphor comes from the gum of the evergreen tree. 3219

## Suits Defy Gravity Canada Fights to Stay at Top

To Canada's fighter squadron in Europe, life is a constant struggle to be high man in a jet plane, for in the battle for the skies, the man on top is the man with the edge. To keep RCAF fighter pilots flying at ever higher and higher altitudes is just one of a multitude of challenges which daily confront our country's air-minded research scientists and engineers. It was back in 1939 that the

famous co-discoverer of insulin, Sir Frederick Banting, started investigations in the complex field of aviation medicine, thus laying the groundwork for present-day studies at the RCAF's Institute of Aviation Medicine in Toronto. The Institute's problem is a heavy one: as supersonic planes probe further and further into the stratosphere, can man be equipped to match the machine?

Doctors and scientists at the RCAF's research center use this decompression chamber to study the effects of high-altitude flying at supersonic speeds on the men who must fly machines ever higher and faster.

Previous "anti-gravity" suits developed by the RCAF enabled Canada's jet pilots to fight at 48,000 feet. The new suit will take them much higher—but just how much is still a secret. National Film Board of Canada Photos

# World Happenings In Pictures

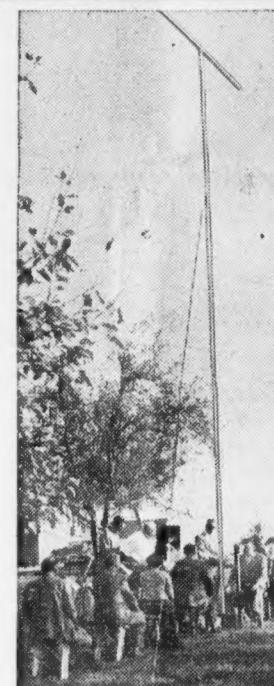

**THE OLD AND THE NEW**—Unique pair are Sandy Somerville and Marlene Stewart, who are the only Canadians ever to win U.S. golf championships. Sandy won the American amateur title 24 years ago and Miss Stewart copped the U.S. women's open crown this year. The two pose beside Marlene's trophy at Toronto dinner in her honor.

**FOXHOLE IN 90 SECONDS**—G.I.'s should welcome this new device—a "90-Second Foxhole Digger" developed by the Stanford Research Institute of Menlo Park, Calif. The Digger enables ground troops to dig their positions in a minimum warning period. Left, a technician places the rocket-explosive unit in a launching tube. After the fuse is ignited, the technician takes cover, and the rocket is driven about two feet into the ground. The charge explodes and—presto—a four-foot-deep, four-foot-wide crater is cleared, right.

**BLIND DATE**—A "date with Michelle Boulet" raffle completely took in the entire male section of the Toronto University student body as well as at least one Toronto newspaper when over 1,000 tickets were sold at 25 cents each for the date with the French movie star. Equipped with a borrowed wardrobe, Isabelle Lafontaine, 23-year-old law student from the University of Montreal, hopped a plane to Toronto and drew the winning ticket held by Terry Dawson during the Toronto-Western football game. Terry's date was put off but he did manage to chat with the supposed movie star and he was none the wiser until the hoax was made known to all. All proceeds went to the University of Toronto United Appeal Drive.

**MOON-EYED**—A practice session of artificial satellite observers is being conducted, above, in Silver Springs, Md. Getting ready for "Project Moonwatch", the observers are going through a dry run in preparation for the launching of the man-made moon next year. Sponsored by the Smithsonian Institution, the observation station is a prototype of 50 Moonwatch stations to be set up across the country.

**FORAGING DEER AND FRIEND**—A cat sniffs at a deer foraging for food on the lawn of a home near Montauk, N.Y., apparently aware that it is against the law to kill deer anywhere on Long Island. Home owners in the area are complaining that ever increasing deer herds are chewing up shrubs and flowers in broad daylight and generally becoming a nuisance.

## HOW CAN HE?

It took the combined efforts of gyroscope manufacturer and the New York Museum of Natural History to solve a riddle millions of years old: How does a fly fly?

Motion pictures, obtained only by dint of much planning, reveal that a fly moves his wings up and down three hundred times a second in flight. Still unsolved, however, is the mystery of how he turns upside down and lights on the ceiling.

## Without warning

Tuberculosis may start without any warning symptoms that are apparent to the patient or his family, but a chest x-ray will discover these signs in the earliest and most easily cured stages. By modern methods of treatment, most cases can be successfully cleaned up but it is important that the disease be discovered in time.

**RETIREMENT**—Nashua, the leading money-winning horse in the world, receives a farewell pat from trainer Sunny Jim Fitzsimmons before he leaves Belmont Park in New York for Lexington, Ky., to begin his retirement. Nashua ended his racing days by winning the Jockey Club Gold Cup race.

**SAW NO PERIL, HEARD NO PERIL**—A boot, a youngster's shoe, a battered tire and the remains of a motor torn from its car, give silent testimony to a family tragedy in Fort Lauderdale, Fla. Mrs. Evelyn Spalton, a deaf mute, was unable to hear an approaching train as she drove her car toward a railroad crossing. The car was struck by the speeding train, and Mrs. Spalton and her 20-month-old son, Byron, were killed.

## Carbon

The girls then attended the Joined Meeting.

### CARBON BAPTIST CHURCH

The long awaited coming of the Rev. Miss Ethel Ruff is materializing at last. She will be with the Carbon Baptist Church on Nov. 25th and possibly Dec. 2nd.

Miss Ruff will speak at the 11 a.m. service on Nov. 25 and will show her slides of Palestine at the 7:30 p.m. service.

Many will remember Miss Ruff from her past labors in the Carbon Community Vacation Bible School and will want to renew the friendship made then. Everyone is cordially invited to attend any or all of the services.

### CARD OF THANKS

I wish to thank everyone for their cards, visits and the help and assistance they gave my son George while I was a patient in the Drumheller hospital.

Leong See and son George,  
Coffee Cup, Carbon

### CARD OF THANKS

We would like to thank our many friends and neighbors for their kindness to us down through the years, also for the lovely presents and the honour given to us at the farewell party at Grainger.

Ed Wise and the Vanover Family

### ALBERTA T.B. SEALS OBJECTIVE IS \$211,500

Mr. R. T. Alexander, president of the Alberta Tuberculosis Association announced Friday the culmination of weeks of preparation by voluntary committees throughout the province was reached during the past few days with the mailing of Christmas Seals in the opening of the campaign to raise \$211,500 to aid in the eradication of tuberculosis. This amount is needed to meet the budgetary requirements of the expanding operations of the Association, which include case-finding, rehabilitation of TB patients, nursing services and welfare, and health education. Additional gray units have been placed in hospitals for the routine X-ray of admissions and thirty-five of

### CARD OF THANKS

I wish to thank my many friends for their lovely cards, gifts, candies, visits and flowers sent to me while I was a patient in the Three Hills hospital.

Irene Snell.

### CARD OF THANKS

I want to take this opportunity to thank all the wonderful people who got together and raised money to pay for the wheelchair I bought for Dorothy. Thanks so much. I shall never forget it.

John Leiske.

### K. L. BEAUTICIANS

Beauty Salon & Barber Shop

## YOUR ALBERTA

BY  
*Russ. Patrick*

This column is the first of a series. "Your Alberta" will appear from time to time in this paper. I hope you are going to enjoy it because it has been designed to keep you informed of various events that are taking place in this great Province of ours—Alberta.

You may wish to write for information. At the bottom of this column is a handy coupon which you can clip and mail to the address shown and tick off information you would like from any one of the Government Departments. If there is any information I can help you with just write a simple postcard or enclose a letter WITH YOUR COUPON and ask me for the information you want. You may also have an anecdote or story of interest about your community which we will try to publish in this column when space permits. So let's hear from you. And do tell us what you think!

**PROVINCIAL GRANTS** to municipalities under the Municipal Assistance Act have been increased since 1951-52 by more than \$5,000,000. Grants to municipalities in the province for the 1956-57 fiscal year total \$9,990,002. The following list shows the steady increase in municipal grants:

1951-52	\$4,665,029
1952-53	5,991,151
1953-54	7,385,100
1954-55	8,534,675
1955-56	9,015,205
1956-57	9,990,002

There are no restrictions on these grants. Many municipalities report that grants are spent on SEWAGE AND WATER SYSTEMS. In many cases municipalities have found that the grant is more than enough for present needs. The Government of Alberta puts no restricting clause on how this surplus is spent. The grant is made to the municipality and it is left to your municipal authorities and you who elect those authorities as to how this money is spent to the best advantage. It is in your own interest to inquire about such things and see that this money is spent wisely.

**FIVE CENTS OF EVERY GALLON** of fuel oil sold to the general consumer goes to the people of Alberta in the form of Municipal Grants. In other words your Municipal Grant is made up of 50% of the 10 cent tax you pay on fuel oil.

**PUBLIC WELFARE** sounds like a high-falutin' phrase. Never-the-less it's something that we are all interested in. The Public Welfare Department deals with such vital things as pensions, allowances and other welfare assistance to Albertans.

There is a very smart booklet entitled "Public Welfare Services" which is free on request and which describes the eight different branches of the Department. It outlines the qualifications you need for Federal Old Age Security, Provincial Old Age Assistance, Blind Persons' Allowance, Supplementary Allowances, Widows' Pensions, Disabled Persons' Pensions and

MOUNT EISENHOWER, NEAR BANFF HOW LUCKY we are living here in Alberta! To the West of us is beauty unequalled anywhere—a top holiday and tourist attraction. In the North and in the South are prosperous resources that make Alberta a unique province.

To illustrate just what this means, compare the National Canadian Wage Rate of \$64.66 PER WEEK to our own wage rate which is \$2.33 HIGHER AT \$66.99. Indeed this is something in which we can all take pride. Truly—OUR future IS here in ALBERTA. Be seeing you soon!

## How to sharpen your shooting eye

Here's a trick you can use to develop your shooting ability even before the coming hockey season opens. You don't need even ice to take advantage of this one, and it's a technique used by many NHL players to practise during the off-season.

Get a plank or a smooth board about a foot wide and four feet long. Wax or soap it until it's really slick and smooth. Set up a target, and use this smooth board as your ice surface from which to shoot the puck.

Remember—this kind of drill won't be too much use unless you do it regularly, so start now and have your shooting eye really sharp by the time the coming season opens.

### Don't be a bad actor

The art of deceptive faking is extremely important in football, but few players make the effort to really master it. A man like Normie Kwong of the Edmonton Eskimos who really knows how to fake is twice as effective to his team. Kwong draws a tackle on almost every play, simply because he fakes so well the opposition

## Better tires seen for 1957

Buyers of 1957 model cars this fall will ride on more dependable and easier steering tires, according to William B. Flora, vice-president, sales, B. F. Goodrich Canada Limited.

Approximately 70 percent of 1957 cars will be equipped with the new 14 inch tires, which, along with the improved 15-inch tires, will help give the new cars a longer, lower look because of the smaller appearance of the tires.

The 14 inch tire will measure about one inch smaller in diameter than the 15 inch casing but the section width of the new tire will be approximately 10 percent wider. Because of the increased section width, the 14-inch tire will contain more materials and weigh more than the older type. An optical illusion results from the decrease in diameter and increased section width, creating the impression that the tire has a smaller diameter than it really has.

Mr. Flora pointed out that, while the 14-inch tire will carry 22 pounds air pressure, two less than the 15-inch, the smaller casing will have the same load carrying capacity. This results from the fact that the 14-inch tire has greater air volume, enabling it to carry the same load with less air pressure. The new 15-inch white sidewall will also appear smaller because of the narrowed sidewall.

## Quick Canadian Quiz

1. By value, rank the five leading minerals produced in Canada in 1955.
2. In 1901 farms in Canada had an average area of 124 acres. What was the average area in 1951?
3. Total government spending last year was \$7,377,000,000. What part of the total was federal spending, what part provincial and municipal combined?
4. What is the origin of the name of the province of New Brunswick?
5. In the first seven months of this year Canada's trade deficit to the United States was \$150 million, \$450 million, \$850 million?

### ANSWERS TO QUICK QUIZ

5. \$850 million. 3. Federal spending, \$4,719 million; provincial and municipal, \$2,658 million. 1. Oil, copper, nickel, gold, zinc. 4. named after the House of Brunswick, England's ruling family when it first became a British possession. 2. 279 acres.

(Material prepared by the editors of Quick Canadian Facts the pocket annual of facts about Canada.)

### LARGE USAGE

English, one of the major languages of the world, is used as a first language by more than 250 million people and is used as a second language by many millions more.

## GEMS OF THOUGHT

### THE PRICE OF GREATNESS

The price of greatness is responsibility. —Winston Churchill

Only those men and women gain greatness who gain themselves in a complete subordination of self.

—Mary Baker Eddy  
Responsibility walks hand in hand with capacity and power.

—J. G. Holland  
Behold the turtle. He makes progress only when he sticks his neck out.

—James Bryant Conant  
Responsibility's like a string we can only see the middle of. Both ends are out of sight.

—William McFee

If any man seeks for greatness, let him forget greatness and ask for truth, and he will find both.

—Horace Mann

## Shortage of many kinds of workers

Employment in Canada remained at a record level in September with a general shortage of many kinds of workers continuing unrelieved, the government said recently.

A joint monthly statement by the Dominion Bureau of Statistics and the Labor Department said manpower supplies tightened moderately in the month as the seasonal withdrawal of students and other short-term workers slightly exceeded the post-summer decline in labor requirements.

culture and 42,000 in non-farm industries.

The statement said the number of persons without jobs and seeking work and the number registered to reemployment at National Employment offices eased moderately during the month.

## Rash statement

Any rash appearing on the skin, especially in the case of children, should have a doctor's attention. While the rash may be due to some simple cause, it could be a symptom of one of the contagious diseases which often start that way, or an allergy. In any case, early diagnosis by the doctor will help and in case of infection, prompt medical action will help to protect the rest of the family.

## New light on the old schoolhouse

Most new schools are modern in design and facilities but there are still many of the old type of school which has poor lighting, with resultant harm to the pupils' eyesight. In rooms that are too dark, a light color on paint and ceiling will help to reflect light on desks and blackboards. Care should be taken that glare from shiny surfaces is eliminated.

## Ready-made or made-to-measure

When buying a suit of clothes a person with an average build is usually able to obtain a satisfactory fit in the ready-made department. For an individual whose size or figure is not average, it is preferable to have one made to measure.

The same is true when buying life insurance. Most salaried men, young professional men and proprietors of small businesses are mainly interested in replacing the loss of their earning power. A ready-made policy will usually fulfill this requirement.

Time, however, has a habit of changing the lives and financial circumstances of men. Salaried men become senior executives, young professional men develop into successful specialists and proprietors of once small businesses find themselves controlling large corporations. For those people whose financial figure has grown, provision against the loss of earning power may not be the prime consideration. The need for liquid assets to take care of succession duties and other obligations, without having to dispose of business assets at a sacrifice, becomes equally important. In the absence of such liquid resources, made-to-measure insurance is a necessity.

A recent case in our experience involved a man, born in poor circumstances, who by his own initiative and sheer hard work in due course became the owner of an automobile dealership. In anticipation of the expansion of his business, he subsequently enlarged his building premises and equipment, incurring a large mortgage and bank indebtedness. While this man had provided adequate protection for his family in the light of earlier circumstances, his life insurance underwriter urged him to buy additional insurance to discharge these new obligations, as well as succession duties, in the event of his premature death. This apparently healthy man died very suddenly not long after the debts were incurred. He had intended to buy the insurance recommended, saying he would do so "when things settle down." Unfortunately that time didn't arrive, with the result that the benefits originally provided for his family disappeared in the settlement of his debts.

Estate planning in many instances reveals situations that can only be covered by made-to-measure insurance. It must always be remembered that planning should provide a program suitable for an individual's situation as it exists today.

### WHY CEMENT TIGHT

Why is cement hard come by? Although production in June totalled 2.7 million bbls., 23 percent more than a year before, high demand pushed factory shipments to 3.3 million bbls., explains The Financial Post. First half year output came to 13.8 million bbls., up 21 percent, but shipments at 13.2 million bbls., paced production by rising at a similar rate. Factory stocks at the beginning of July amounted to 1.5 million bbls., against 1.3 million a year earlier.

## Today's French Foreign Legion in Africa equals heroics of 'Beau Geste' of Twenties

By FRANKLIN JOHNSON  
(CPC Correspondent)

Some of the romanticism of Beau Geste is being reincarnated by the famed French Foreign Legion as it plays a big part in the new "Battle of the Sahara".

France appears to have won the first round as Maj.-Gen. Robert Quenard directs operations out of Colomb-Béchar city of 10,000, which is one of the largest in the Sahara, and the tide has turned distinctly against the rebels since last June when the French were reeling on the ropes apparently set up for a knockout in North Africa.

Just as in the novel Beau Geste, by Percival Wren, which in the 1920's so captured the fancy of readers that it became a best-seller in the English-speaking world and one of the most popular movies of the era, this is a war of hot little engagements full of color and individual action usually lacking in modern war.

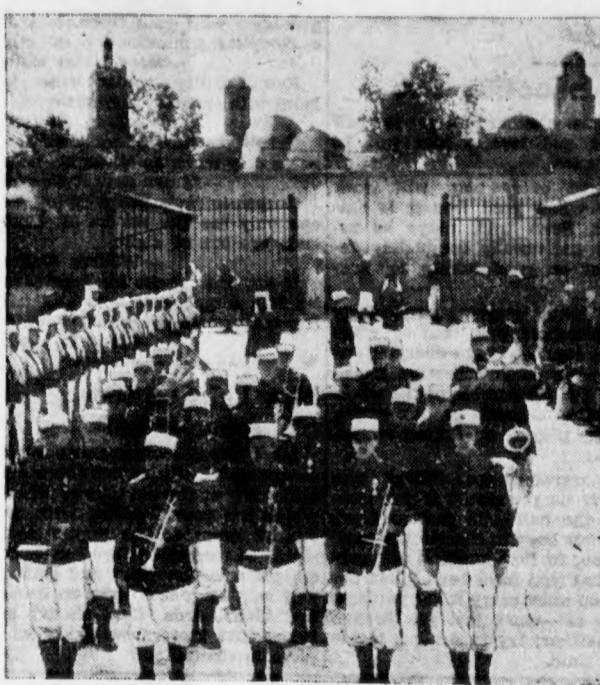

It will be remembered by those who thrived to the story of Beau Geste that the unforgettable climax is an Alamo-like stand made by a small desert outpost of Legionnaires against overwhelming odds of attacking Arabs.

The grisly ruse that wins for the French is the inspiration of one of the last survivors that if he propped the bodies of the dead Legionnaires into the apertures with their glassy eyes and silent guns pointed out toward the attackers, they would think that the force still was intact and not close in.

The final two holdouts rush madly from one opening to another, firing successively over the shoulders of their "immortal" comrades to complete the illusion until rescuers arrive.

A real-life story like that about an attack last June by 400 Moroccans at midnight upon a desert outpost, Oum el-Achar, near Tindouf at the junction between Algeria and Mauritania, is adding to the lore and legend of the Foreign Legion and shows the Beau Geste-like character of the fighting going on.

The garrison consisted of only 10 Frenchmen and 20 North Afri-

A detachment of the famous French Foreign Legion

can troops. In addition to the great odds, there was treachery within the post and when the assault began, the lieutenant in command named Lentignac, was killed by a stab in the back and two North African troopers were wounded.

The nine survivors held out in the best Beau Geste tradition, although at one time the invaders forced their way into the courtyard, where they were held at bay with hand grenades. At dawn the attackers retreated, and reinforcements arrived in the nick of time. Quenard's troops have a new

tactic unfamiliar to the old Legionnaires, for airplanes are playing an important part in maintaining the long line of operations covering about 600 miles from Figuig to Tindouf on the southern border of Morocco.

France has had to rely heavily on the Foreign Legion in this war because opposition at home to sending ordinary draftees into North Africa for a time handicapped raising a large enough force to do the job. This has given rise to the riots around departing troop trains which embarrassed the French by being reported widely in the world's press.

The French at least seem to have nothing to be ashamed of, militarily speaking, of course, in the way the army is functioning in the current drive, however.

The Fourth French Motorized Infantry Division, commanded by Brig. Gen. Baro d'Esneval, is patrolling 250 hot, dry miles from the Mediterranean south to Figuig. The garrison at Tindouf has been increased from 150 to almost 1,500. A new chapter in the war-like history of North Africa and the Sahara is being written.

The Foreign Legion is playing its part as the hard-bitten core of fighters that it always has been. Many of its members still sport the beards which traditionally are the badge of its intrepid manhood.

Included are former German soldiers who never surrendered and other soldiers of fortune and dead-enders out to forget it all in the most desperate and dangerous activity they can find. From all reports they are not being disappointed by the Moroccan guerrilla Army of Liberation.

Since "legion" in military parlance stemming from the Romans really means a force raised by a levy upon the citizens, this is an obvious misnomer when applied to the "Foreign Legion", which really is the Regiments Etrangers, but by any other name it still is the rough and tough fighting force of old.

### HOT SUBJECT

The do-it-yourself idea is good when it's a matter of painting and hammering nails into wood but it isn't such a good idea for the amateur to do a wiring job perhaps using impoverished wire or cords which may burn the house down. Too heavy loading beyond the capacity may result in a flareup. Only a qualified electrician should handle these jobs. For safety's sake it is wise to have a periodic inspection of the house for fire hazards. The local fire department will gladly give the benefit of their knowledge and advice to prevent a home fire. It's cheaper and easier on everyone to have one fireman inspect the house than have the whole station's equipment turn out to control a fire and try to save the lives of the inmates.

### Ventilation vs fatigue

Good ventilation will help to avert fatigue. Stuffy air in rooms, office or store is harmful to the respiratory passages, especially if the air is dry. The window should be opened even if only a few inches. At night, it is important to healthy sleep to have fresh air in the bedroom.

## White fabrics exist because women insist

Men who grumble at women's constant demands for the "impossible" can thank the ladies for the white shirts they're wearing. Without womanly persistence a hundred years ago, white fabrics might be as rare as white mink.

If a lady of 200 years ago could peek into modern bedroom drawers full of gleaming white hankies, white lingerie and white blouses, she would be spellbound with envy. To her, the possession of even one white garment was a mark of social prestige.

In those days the process of bleaching fabrics was so long and tedious that only a privileged few could afford the finished product.

For instance, in order to have a white sheet to sleep on, the material first had to be steeped in alkaline lyes, then washed and spread on the grass for weeks. After repeating this process five or six times the same material was subjected to a bath of sour milk or buttermilk for a few days, washed and again spread in the sun. This procedure continued until the material was as white as could be expected.

Although this elaborate method of bleaching was quite the usual one for many years, it was hardly practical on a large-scale basis and the result would not hold a candle to the "whiter-than-white" fabrics of today.

However, practical or not, women insisted on more and more white garments. And leading men in the chemical industry give credit to the persistent little lady, for her incessant demands for more white in her life brought about the birth of modern bleaching techniques.

Early in the last century, the search for more efficient bleaching methods brought to light many new chemicals. These turned out to be endlessly useful to industry and formed the nucleus of the heavy-chemical economy of England for many years.

The development of these efficient bleaching agents such as sodium perborate, chlorine and hydrogen peroxide opened the way for the truly white fabrics of today. No longer are white goods a novelty, miles of white garments flutter from clotheslines every Monday morning. And according to the soap makers, it has now become a matter of prestige to display the whitest wash in the neighborhood!

## Dairy products slump slightly

In spite of the quantity of good pastureland available this summer, Manitoba butter production has shown a 5 percent drop from the amount produced last year, January to September. The cows kept for milling purposes showed an increase of 3 percent, and since the weather was neither hot nor dry, most dairymen expected production to rise.

Chief of the department of agriculture's dairy branch, C. H. P. Killick, suggests that better crop

prospects may have had a depressing effect on production. He pointed out that to produce butterfat at 58 cents a pound is not a profitable operation unless it is combined with other farm enterprises.

"A farmer's natural tendency", he said, "is to cut down where possible on the least profitable operation."

Butter stocks in storage in Canada have gone down 2.7 million pounds since last year at the same time. Winnipeg holdings on October 1st were 15,911,000 pounds compared to 18,888,000 pounds same time last year. The reason for the reduction in stocks of government storage butter is largely due to the heavy movement of butter out of storage to both the west coast and eastern Canada.

Cheese production over the first nine months of this year has gone up by 1.4 percent, Mr. Killick said, although it took a plunge in September. Canadian cheese stocks were 2.3 million pounds below the period from January to September last year.

Ice Cream production shows a decrease of 15.2 percent compared to last year.

### NEW PLANTS

Since the war more than 10,000 new manufacturing plants have been established in Canada and manufacturing now employs nearly twice as many people as does agriculture.

**COMMAND CHANGED**—A Winnipeg regular army regiment changed command at Fort Osborne Barracks when the Second Regiment, Royal Canadian Horse Artillery marched past their retiring commanding officer for the last time. Taking over from Lt. Col. R. K. Kingstone was Lt. Col. John L. Drewry, 37, of Cobourg, Ont. Lt. Col. Drewry recently arrived in Winnipeg from Fort Monroe, Virginia, where he had been Canadian liaison officer at the headquarters of the U.S. Army Continental Command. During the Second World War he had served overseas with the 4th Field regiment, R.C.A., and since then attended the Staff College at Camberley, England and the Armed Forces Staff College at Norfolk, Virginia. Lt. Col. Kingstone took over command of the regiment in August of 1953 at Winnipeg and took them overseas for a two-year tour of duty with the NATO forces in Germany.

## Level Land

After the Dorcas Sale on Nov. 14, John Leiske was surprised with a purse of money made up by his good friends in the Level Land district. Somehow it leaked out that he bought a wheelchair for his daughter Dorothy. Mrs. Henry Reifsnyder, Pastor Goertzen made the presentation after a nice speech. Mr. Leiske himself is not accustomed to such honors as that. He claims it's more blessed to give than to receive. At the same time he thanked all the people for being so kind and helping along in this case. It is understood that Richard Huether and Marvin Dick got in the donations as follows: S. D. Leiske \$20, Emil Berreth \$20, Jacob Gimbel \$10, Mr. and Mrs. H. Young \$10, Albert Huether \$10, Willard Huether \$5, Mrs. York \$5, Alton Suelzle \$5, Sam Huether \$5, Reinhold Huether \$5, Theo Bechthold \$5, George Johnson \$5, Richard Huether \$5, Marvin Dick \$5, E. C. Chandler Sr. \$5, Dan Gramms \$5, Emil Gramms \$5, Fred Grabo \$5, Dan Saylor \$5, Ben Huether \$5, Henry Stern \$5, Adam Berreth \$5, Bill and Glen Triebwasser \$5, Mabel Lang and folks \$5, Gilbert Bechthold \$5, Elmer Schabor \$5.

### PLAN NOW

In the past few years an increasing amount of attention has been given to the problem of business and industry establishing a more even employment pattern between summer and winter. As most employers know, the direct and indirect cost of under-employment of our labor force during the winter months and over-employment during the summer months is considerable.

Federal, provincial and municipal governments throughout Canada have in recent years given their support to programs aimed at increasing the amount of work available during the

winter months. Many of the campaigns conducted on the local level have been very successful. As an example, in one medium-sized city in Western Canada last year it was estimated that the "Do It Now" campaign resulted in more than 1,700 additional jobs being provided, which involved an estimated gain of \$2,000,000 in the money circulating in the community.

There are many reasons why businessmen consider it in their own best interests to try to do something about this problem. One reason is the cost of unemployment to the community in terms of loss of wages and purchasing power, welfare costs, and so on. Another is that an industry which operates the year round has a better chance of a high degree of efficiency than an industry which stops in the winter and starts up again in the summer, because of such factors as the hiring and training of temporary staff. Generally speaking, a seasonal pattern contributes to the "boom and bust" tendency in an industry.

The following list of measures taken by businessmen in other communities across Canada are offered for your consideration.

1. The liquidation of annual vacation during the off-season.

2. The transfer of staff from slack to busy departments or divisions during the off-season.

3. The building of new plants or additions to existing ones during the winter.

4. The production and stockpiling of standard products in the winter.

5. Special campaigns and special discounts to induce winter work.

6. The training and retraining of personnel during the winter months.

7. Diversification of industry within the community.

8. Diversification of products in seasonal industries.

9. The scheduling of Maintenance, Repair, Redecoration and Renovation During the Off-Season.

deal of advance planning—in fact, planning is the key to this whole program.

For advice and assistance as to what you can contribute toward this planning, please get in touch with the nearest office of the National Employment Service. Remember that when everybody works, everybody benefits.

### HAIL SUPPRESSION PLANS DISCUSSED FOR 1957

Some 30 farmers from the district across the southern half of the M.D. of Kneehill met in Carbon on October 17th to discuss plans for a hail suppression project in 1957.

As the only fair and reasonable solution to the financial problem for this year, it was decided to ask the council for a plebiscite again for the por-

Obviously, most of the measures listed above require a good

EDMONTON**

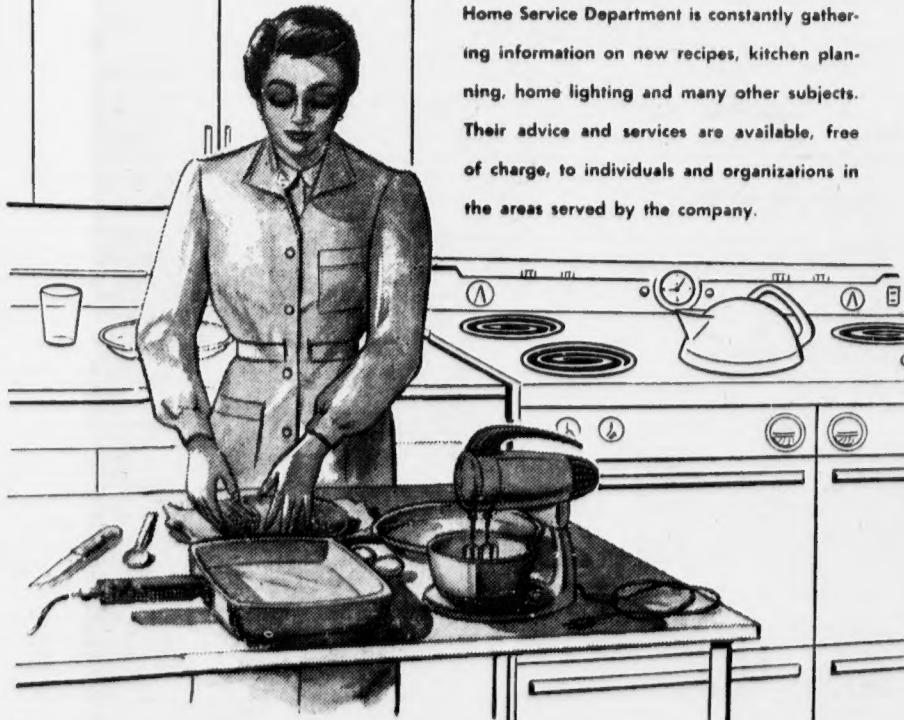

This child could have become another victim to clothing fires, were Mother not alert and removed the matches from the toddler's reach. Kiddies are the most frequent victims of clothing fires, and the only safe way to reduce this annual toll is to keep matches out of their reach at all times. The Fire Commissioner's records show carelessness with matches being responsible for 79 fires last year, with a dollar loss value of \$45,508.00. The suffering and grief resulting from hurts and death are not measurable in dollars and cents. Keep matches from reach of children.
